

Capability Statement

TriTech Enterprise Systems, Inc. is an Information Technology (IT) Consulting Firm, established in 2002. We are committed to increasing the competitive advantage of our clients by providing cutting-edge solutions through innovation, research, and the application of emerging technologies.

Our Core Capabilities

TriTech brings expert agile business, product, project, and software development capabilities to our clients. Our core competencies include Program/Project Management, Software Development, Network Infrastructure, and Systems Integration and Testing. TriTech is a leader in the delivery of enterprise development and management services that use innovative technologies such as microservices and cloud-based application architecture.

Custom Software Development

TriTech offers agile rapid software development delivery services that meet or exceed the process appraisal requirements of Capability Maturity Model Integration Maturity Level 3, an internationally recognized standard in process improvement and process maturity. TriTech uses its subject matter experts in the development of cost-effective solutions design and management to match your unique challenges.

- Custom solutions and agile rapid software development for cloud and local server environments
- Agile management and development approaches that use the Kanban Method and Scrum
- Mobile, web, and desktop application development

Coaching and Training

TriTech's training services support the management and evolution of executives, managers, and individual team contributors. Through a unique combination of modern management practices, including the Kanban Method, TriTech enables organizations and teams to "get ahead" of their risks and deliver their projects on time and on budget.

Technology

Through our government, commercial, and non-profit experiences, TriTech has developed a competency to develop, manage, and support clients using private and Open Source solutions. TriTech's core technology competencies include:
